

Safe Talk Pre-Flight Briefing

February 2025 Initial Issue

Safe Talk Overview

It is mandatory that all seniors use the most current version of Safe Talk available on the Crew Portal in pre-flight briefings

All Crew Members including seniors and deadheading crew must answer a Safe Talk question. All questions asked must be taken from the current Safe Talk document

Seniors shall not ask questions which are not in the Safe Talk publication

All topics (SEP/AVSEC/GMT) **relevant to the flight operated** must be covered in every briefing in all cabins

It is mandatory for all seniors to follow the published Safe Talk guidelines when conducting a pre-flight safety briefing

For any additional information regarding Emirates Pre-Flight Briefing Standards and Procedures, please refer to the [OM-E Sub-Section 3.1.2.5](#)

Outstation Pre-Flight Briefing

At Outstations, after each full rest period down route, multi sectors, medium and long haul flights, the Cabin Supervisor must facilitate a discussion with all Cabin Crew. When there is more than one Cabin Supervisor, the Purser will assign who will facilitate the discussion. The Purser must be present to oversee the discussion.

Examples of a safety or emergency related discussion to be facilitated are listed below. Each Cabin Supervisor, under the supervision of the Purser can decide upon the topic for discussion, but it should be relevant to the flight. It is mandatory for all seniors to follow the published Safe Talk guidelines when conducting a pre-flight safety briefing

- Pre-Flight Checks
- Cabin Secure for take-off and landing
- Securing and stowage of cabin and galley items
- ALERT depending on the airfield the flight is departing from
- A rejected take-off on departure and a potential evacuation
- The specific challenges of an evacuation at the departure airfield
- Planned emergency cabin preparation for landing or ditching
- Anticipated and Unanticipated Light Turbulence; conducting and passing Cabin Secure Checks; Areas to check a) during service when carts are in the cabin; b) when there are no carts in the cabin
- Anticipated and Unanticipated Moderate or Severe Turbulence and Areas of Responsibility for Cabin Secure Checks
- Decompression whilst flying over mountain ranges

The safety or emergency related discussion should relate specifically to the flight to be operated. The following points should be considered:

- Aircraft Type
- Environment of the airport of departure e.g. is the runway surrounded by water? Weather conditions?
- Time of day and levels of natural light e.g. Night time departure
- Relevant Safety and Emergency equipment
- Passenger profile e.g. Special Category Passengers
- Routing e.g. over water, mountainous region etc
- Potential weather conditions during the flight

B777 Aircraft

Question	Answer
After the emergency access code has been entered how long will the Flight Deck door remain unlocked?	The door unlocks for 5 seconds.
State the pre-flight check of L3 cabin door on the B777- 300.	The door owner shall ensure: 1. The door is disarmed 2. The Emergency Power Assist System (EPAS) pressure gauge needle is in the green zone 3. The RED arrow is aligned when the door is closed and locked 4. The safety strap is fully retracted and not visible in the door frame
How would you conduct the pre-flight check on an open cabin door?	Any open cabin doors must be closed in order to carry out the pre-flight check.
Where is the ELT A06/ADT406s located on the B777-200?	• L1 station • L4 station
State the Cabin Crew position responsible for securing the MID Y/Class galley on the B777-300 (3 Class).	L3

[Contents](#)

B777 Aircraft

Question	Answer
State the location of the fire protective gloves on the B777-200.	• Flight Deck • R1 • R4
What must Cabin Crew ensure prior to closing a cabin door to avoid obstructions while closing or arming of the door?	Ensure that: • The door frame and floor brackets are free of debris • The safety strap is fully retracted and not visible in the door frame
State the pre-flight check of the ELT A06.	• Correct quantity and securely stowed • Toggle switch is in AUTO position • Antenna is fitted
True or False? In the event of a trash compactor smoke/fire situation, turn off the galley power to shut down the electrical power to the trash compactor and eliminate the heat source.	True
State the function of the Horn Shut-Off switch on the CSP. (EVAC signalling system)	Silences the audio alert at that station only.

B777 Aircraft

Question	Answer
What safety and emergency equipment will be removed by L1 crew member on the B777-300 in a land evacuation?	• 1 SRAK • 1 Megaphone • 1 ELT • 1 FAK (All Cabin Crew take Water and Flashlight)
What is the state of the oxygen inside the Flight Deck?	Gaseous
State the location of the full face quick-donning oxygen masks in the Flight Deck.	The oxygen masks are stowed adjacent to each Flight Deck seat.
In case smoke is detected in the lavatory, state the audio and visual indications inside the affected lavatory.	• Red indicator light on the smoke detector will illuminate • A horn will sound inside the lavatory
State the pre-flight check of the smoke detector in B777 First Class full height suite.	The smoke detector sensor is not tampered with or obstructed.

B777 Aircraft

Question	Answer
Following the smoke detection system reset, which indication will remain until smoke dissipates completely?	The red indicator light on the smoke detector remains illuminated until smoke dissipates completely.
Which PA has the highest priority? (Overrides all other PAs)	Flight Deck PA.
Where are the Direct Access PA buttons located on the B777-300?	L1, R2 and L5.
When should cabin crew initiate potable water system shut-down on the B777?	The potable water system shut-down must be initiated in the following situations: • Individual water shut-off valve is not effective • Unidentified water leak
Which safety and emergency equipment is available in the CRC?	• 2 Fire Extinguishers • 2 Flashlights • 5 PBEs • 1 Crash Axe

[Contents](#)

B777 Aircraft

Question	Answer
Which Cabin Crew is responsible to conduct the pre-flight Safety Check of the CRC on the B777-300?	L5A (or R3 if L5A is not available).
What is the audio indication inside the CRC when the airflow system is deactivated?	Five HI-LO chimes will sound inside the CRC.
How can Cabin Crew reset the audio and some of the visual indications in the cabin in the event of smoke detected in the CRC?	By pressing the flashing amber light above the CRC entrance door.
How long is the duration of the oxygen flow in the CRC?	Approximately 22 minutes.
In the event of a rapid decompression, what are cabin crew actions while occupying the CRC?	• If occupying a bunk – fasten the bunk belt tightly • If not occupying a bunk – immediately access a vacant bunk and fasten the bunk belt • Activate and don an oxygen mask • Upon hearing the Captain's PA, follow appropriate Post Decompression SOPs

[Contents](#)

B777 Aircraft

Question	Answer
True or False? Soft articles and shoes may be stowed in the Business Class seat shoe stowage, provided the items fit in the space available and do not protrude/overhang from the stowage dimensions.	True
How many infants can a single adult travel with?	Maximum of 2 Infants.
When shall cabin crew perform the 30 seconds silent review (ALERT)?	For every take-off and landing (During the No Contact Period).
State the pre-flight check of the SRAK.	• Correct quantity and securely stowed • Red or green plastic seal intact
State the Flight Crew command that rules out an evacuation or a precautionary disembarkation.	“This is the Captain, Cabin Crew Revert to Normal Operations”

[Contents](#)

A380 Aircraft

Question	Answer
State the location of the survival kits on the A380 aircraft.	• Main Deck: is attached to the door sill end of the slide raft • Upper Deck: is located in the door lining, it is protected by a quick release cover
Are Cabin Crew permitted to stow headset and toy bags in the lavatory?	No
What will happen to the Flight Deck door in the event of a rapid decompression in the cabin?	The Flight Deck door escape panel opens automatically.
What is the visual indication on the corresponding Area Call Panel (ACP) when smoke is detected in a lavatory?	Flashing amber light on corresponding Area Call Panels (ACPs).
When can the Galley Roller Blinds be used and what precautions must be followed?	• Used only during passenger boarding and disembarkation • When the roller blinds are deployed, all galley electrical equipment must be switched off (except chillers)

A380 Aircraft

Question	Answer
State the location of the FAK at the M3 area on an aircraft fitted with the LD-CRC.	MR3
What is the communication protocol during the 'No contact' period?	• Cabin Crew including the Purser and Cabin Supervisor shall not contact the Flight Crew during the 'No contact' period • An emergency/abnormal situation observed during the 'No contact' period should be communicated to the Purser or Cabin Supervisor
How is a PA initiated for both decks of Y/C on an A380 2 class?	Press PA + 4 press and hold PTT.
State the location of the ADT 406S.	• ML5 station • UL1 station
How can the audio and some of the visual indications be reset in the event of lavatory smoke detection?	Pressing the SMOKE RESET hard key/soft key on any of the FAPs or mini FAPs resets the audio and some visual indications. The remaining visual indications will be visible until all smoke has dissipated.

A380 Aircraft

Question	Answer
How is the flow of oxygen activated for the cabin automatic drop-down oxygen system and to which mask/masks will the oxygen flow?	• Oxygen flow is initiated to the individual mask when the mask is pulled down • Oxygen will flow in the pulled mask only
What is the pre-flight check of the Fire Protective Gloves?	Correct quantity and securely stowed.
What are Cabin Crew actions when the Decompression Alert activates? (Cabin Altitude exceeds 10,000 feet)	• All Cabin Crew shall be seated on their jump seats with seat belts and shoulder harness fastened • Be prepared to put on drop-down oxygen mask
What actions should the Cabin Crew take when the Cabin Pressure Light flashes red at their door?	Cabin Crew shall not open the door, immediately report to the Purser who shall inform the Flight Crew once the aircraft has come to a complete stop and engines are off.
Where are the water shut off valves located inside the shower spa?	SPAs are equipped with 2 water shut-off valves located under the sink: • One for the toilet and washbasin (sink) • One for the shower

A380 Aircraft

Question	Answer
State the pre-flight check of the A380 Portable Oxygen Bottle.	• Correct quantity and securely stowed • Minimum acceptable pressure is 1500 PSI • Aviation oxygen mask is connected • Carrying strap is attached
What are the secondary exits for a land evacuation?	None
State the auxiliary exits in case of a land evacuation.	Flight Deck sliding windows.
When must the Upper Deck AFT galley staircase barrier be used?	• On Ground - Cabin Crew must extend the AFT galley staircase barrier when carts are being loaded or moved around in the AFT galley • During Cruise - Cabin Crew must extend the AFT galley staircase barrier at all times
How many classes of Dangerous Goods are there?	Nine

A380 Aircraft

Question	Answer
State the audio indication in the cabin if the upper avionics compartment door is open and all cabin doors are closed.	A triple low chime sounds in the cabin every 30 seconds.
Which Cabin Crew is responsible for conducting the pre-flight safety check of the LD-CRC?	MR2 Cabin Crew.
State Cabin Crew action if the PBE is accidentally donned backwards.	Do not remove it, rotate the PBE until it is properly positioned.
State the emergency equipment in the LDCRC.	• 2 Fire extinguishers • 3 Flashlights • 2 PBEs • 1 Crash axe • 2 MRTs
Which passengers require an infant/extension seat belt?	• Infants under the age of two • Passengers requiring it • Pregnant ladies

A380 Aircraft

Question	Answer
State the infant life jacket inflation process during a ditching emergency.	• Inflate one chamber during cabin preparation away from passenger view • Instruct the adult to inflate the second chamber prior to evacuating the aircraft
During which phase of the flight can the social areas be used?	During the cruise phase ONLY.
What are the 3 elements of the fire triangle?	Oxygen, Heat and Fuel.
Where is the gust lock located for M2/M3/M4/M5?	Above the support arm.
State the location of the PRM Lavatory Water Shut-off Valves on the A380.	• One under the sink for tap water • One at the base of the toilet seat at floor level for the toilet flush

[Contents](#)

A350 Aircraft

Question	Answer
True or False? There are 2 PBEs located at every station.	False. There are 3 PBEs at L1 and 1 PBE at R1.
What instructions may Cabin Crew give to passengers during a high speed rejected take-off?	“Bend down, stay down”
State both the normal and emergency access code for the Flight Deck Door.	• Normal: 1 then # • Emergency: 3 4 5 and #
What chime will be heard when the smoke detection system is activated?	A repetitive triple low chime will sound every 30 seconds.
What precaution must be taken after turning off the Water Shut-off Valve in the galley?	Whenever the water supply in the galley has been turned off, ensure the beverage makers remain switched off.

A350 Aircraft

Question	Answer
When the doors are armed, what features are armed?	• Girt bar is engaged into floor brackets • EPAS (Emergency Power Assist System) is armed • Slide Armed light is armed
Where is the red manual inflation handle located?	Right hand side of the girt bar.
State the cabin crew actions in a Decompression Alert.	All Cabin Crew shall be: • Seated on their jump seats with seat belts and shoulder harness fastened • Prepared to put on drop-down oxygen mask
When smoke is detected where will there be flashing amber lights?	• On corresponding ACPs • On the exterior wall of the affected lavatory or CRC.
During a state of alert, what is the Flight Crew command 2 minutes prior to touchdown?	“This is the Captain, Attention Crew at Stations”

A350 Aircraft

Question	Answer
The Safety Area of Responsibility of R2 includes the cabin, from what row to R2 station RHS?	Row 21.
How is the Oxygen System activated in the PSUs?	Pulling down one mask will remove the activation pin and activate the oxygen generator. Oxygen will flow to all masks attached to that oxygen generator.
When the seat belt sign is switched on for turbulence, what is the procedure related to the usage of baby bassinets?	During turbulence, and any time the seat belt sign is illuminated, the bassinets must not be used.
True or False? When smoke is detected, the SMOKE RESET hard and soft keys on the FAPs and AAPs will flash red.	False. They will illuminate red.
If required during a state of alert, what is the Flight Crew command 30 seconds prior to touchdown?	"This is the Captain, Brace, Brace"

[Contents](#)

A350 Aircraft

Question	Answer
True or False? In the Flight Deck, there is 1 piece of every firefighting equipment.	True
What does EPAS stand for?	Emergency Power Assist System.
When will the Cabin Pressure light flash red?	When there is residual pressure in the cabin, provided that: • The associated door is disarmed • The aircraft is on ground
How is the the Sea Dye Marker used in a ditching situation?	During daytime in an upwind direction of the slide raft.
State the procedure for used safety and emergency equipment.	Cabin Crew must ensure that used safety and emergency equipment is: • Stowed and secured in its original stowage before landing • Recorded in the Cabin/IFE Defect Log Book

A350 Aircraft

Question	Answer
True or False? The R3 Safety Area of Responsibility includes the MID Economy Class galley.	False. L3 is responsible for the MID Economy Class galley.
What are the Primary Exits for a Ditching?	All Cabin Doors.
State one indication observed when a PBE fails to activate.	• If you do not hear the sound of the oxygen flow immediately after donning and/or • The hood does not inflate within 2 to 3 minutes, or collapses
List 3 duties you could ask an ABP to conduct apart from door operation.	They can help with: • Elderly or frail passengers • PRMs • Passengers with disabilities • Unaccompanied minors/UMWP • Passengers with infants and children • Passengers at the bottom of the slide in the event of a land evacuation by holding the base of the slide
How many passengers can evacuate via L1 or R1 door at a time?	One at a time.

[Contents](#)

A350 Aircraft

Question	Answer
After extinguishing a lithium battery fire, how often should Cabin Crew monitor the device once secured in the lavatory?	Every 30 minutes.
What is the duration of the Emergency Lights?	Once activated, the emergency lights will illuminate for approximately 10 minutes.
State the pre-flight check of the spare Aviation Oxygen Masks.	• Correct quantity and securely stowed • Mask tubing is fitted with bayonet metal fitting
State the indication that the lavatory oxygen cylinder is empty.	A red string is visible from the opened door stopper.
Where are the Crash axes located on the aircraft?	•1 in the Flight Deck. •1 Crash Axe at R4

Aviation Security

Question	Answer
In case of sexual harassment, what actions may Cabin Crew take?	• Instruct the person to stop • Separate offender/s and victim/s where applicable • Inform the person that their behaviour is not acceptable • The person may be given a Formal Warning by the PUR/CSV or offloaded at the next available station • All incidents must be reported to the Cabin Supervisor/Purser and Captain
How must the seat pockets be searched?	By removing the pocket contents.
How must Cabin Crew search in-between seat cushions for Economy Class seats?	• Lift armrest (where possible) • Firmly pull one seat cushion inwards using both hands • Check the space between the seats
When is a Pre-flight Security Check required?	• When a Licenced Service Provider is contracted to conduct a Pre-flight Security Search • On non-revenue flights – ferry and positioning
Which checklist must Cabin Crew refer to prior to and during security search?	Cabin Crew Security Checklist.

Aviation Security

Question	Answer
True or False? In DXB when Security Staff are not available and Cabin Crew conduct Pre-flight Security Search, the search of catering items, sealed or unsealed, is not required.	True
True or False? At Outstations, Cabin Crew are required to break the seals in order to search inside bags, containers and service carts even if seals are still intact or the items are catered from DXB.	True
What are the three possible reactions during periods of stress, trauma and fear such as a hijacking situation?	• Empathy • Hero • Helplessness/Guilt
What actions must Cabin Crew take to deter theft in-flight?	• Remain vigilant and maintain a presence in the cabin • Monitor the passengers for suspicious behaviour
Who is responsible to monitor Cabin Crew during Security Search?	Purser

[Contents](#)

Aviation Security

Question	Answer
State the Pre-flight Security Search/Check method.	• Start in the cabin area • Aft to forward, facing forward • Bottom to top (floor level upwards) • Inboard seats followed by outboard seats e.g. D-E followed by C-B-A. • Row by row • Once cabin search is completed, search the lavatory, galley and CRC as applicable Refer to the relevant Security Search Areas of Responsibility diagrams for exceptions on where to start the search.
What are the Security Search requirements of the Medical Service curtain bag?	• Cabin Crew shall search inside the Medical Service curtain bag.
What are the contents of the restraint kit?	• 3 pairs of key cuffs • 2 straps • 1 key • 1 release tool
Is a passenger allowed to return to the aircraft to retrieve a left behind item?	Yes, if the passenger is escorted by Cabin Crew or Ground Personnel.
How many escort(s) are required when moving a suspicious article to the LRBL?	2

[Contents](#)

Aviation Security

Question	Answer
What is the role of the observer during the restraint process?	The observer must instruct the Cabin Crew involved to act immediately in the event of any medical issue arising, e.g. If the passenger is having difficulty breathing.
True or False. Passenger's hands must always be restrained from behind.	True
How must the Security Search of life jacket compartments (sealed & unsealed) be conducted?	Random visual check of both seals. If a life jacket compartment is unsealed or one of the seals is tampered, broken or missing: • Break the intact seal (if applicable) • Remove life jacket • Search stowage
How long should Cabin Crew be seated next to a restrained passenger?	Cabin Crew should be swapped with another Cabin Crew every 30 minutes.
In self-defence and restraint techniques, what are Pressure Points?	The most sensitive parts of the nerves in the human body.

GMT

Question	Answer
What is the pre-flight check of the Zoll AED 3?	• Available in the correct location • Green check displayed in the status indicator window • Open the AED case and check the following contents: 1. Two sets of AED pads: One set of AED pads is plugged into the machine by default. A spare set of AED pads must be available in the case. 2. Blunt-tipped scissors are attached to each set of AED pads 3. AED accessory kit is attached to each set of AED pads
What is the first step of the Primary Assessment?	Assess scene safety and take standard precautions.
True or False? When using the portable oxygen, secure bottle with a carrying strap or a seat belt adjacent to passenger to prevent movement and possible injury during turbulence.	True
State any 3 precautions Cabin Crew should check with the casualty before administering any on-board medication.	• Allergies to the medication • Has taken alcoholic beverages • For female casualties, if they are pregnant • Special precautions mentioned on the medication packaging, dosage guide or as advised by Ground Medical Support
Where can you find the CPR pocket mask for rescue breathing?	FAK

GMT

Question	Answer
State any 3 management considerations for stabilizing large objects stuck in the eye.	• Advise the casualty to look at a fixed point • Use bulky clean pads and place them on the side of the protruding object. • Secure the bulky pads with a bandage without applying pressure on the embedded object • Cover the uninjured eye with a loose pad and secure it with a bandage to help keep both eyes still
You are the first responder at the scene, what is your immediate action to manage a closed fracture on the arm?	Instruct casualty not to move the injured limb.
True or False? Cabin Crew must return the used E-Z spacer or used chamber to the EMK after cleaning it with alcohol wipes.	False, give the used chamber to the casualty.
What is the normal breathing rate for an infant?	30 - 50 breaths/minute.
When should Cabin Crew administer oxygen to a casualty?	• Immediately if the oxygen saturation (SpO2) is 90% or below • Immediately If a life-threatening condition is identified, with special considerations for asthma • At the request of GMS

[Contents](#)

GMT

Question	Answer
True or False? Only Senior Cabin Crew can use the EMK Glucometer with GMS permission.	False, all cabin crew can use the EMK glucometer.
State any 2 management considerations for Splinter Injuries.	• Do not confuse Splinters with Impaled objects in a wound. Usually, there is no bleeding associated with a splinter injury • Do not attempt to remove a splinter if it entered a fingernail • Do not attempt to remove a Splinter if it enters an area close to the eyes
In which kit can you find the pain and fever medication for infants and young children drops?	FAK - White pouch
How often should Cabin Crew monitor the vital signs of a conscious casualty?	Every 05 minutes.
What actions must Cabin Crew take if a casualty suffering from vomiting does not have their own medication?	• Adult Casualty: administer medication for nausea and vomiting from the FAK • Child Casualty: Consult GMS for Nausea and vomiting medication for children from the EMK

GMT

Question	Answer
If there is no connection with GMS and no plan for diversion, when can the Cabin Crew stop CPR?	Cabin crew can stop CPR after 30 minutes of continuous “no-shock advised” prompt by the AED.
True or False? If an infant is delivered with the cord around the neck, try to gently slip it over the infant’s head to allow the rest of the infant’s body to be delivered.	True
What are the chest compression techniques for infants?.	• 2 fingers placed on the centre of the chest just below the nipple line • Two-thumbs encircling hands, with thumbs placed over the breastbone, below the nipple line
True or False? Encouraging abdominal massage is one of the management strategies for Abdominal Discomfort (trapped gases) due to barotrauma.	True
State 3 of the vital signs to be routinely monitored and recorded.	• Level of consciousness • Pulse rate • Breathing rate • Temperature • Pain level • Oxygen saturation also referred to as SpO2
